README.md

Voting Eligibility System

■ About the Project

The Voting Eligibility System is a beginner-friendly Python project that checks whether a person is eligible to vote based on their age and Indian citizenship.

This project was created to practice basic Python programming concepts such as functions, conditional statements, loops, and exception handling.

■ Features

• Takes the user's name, age, and citizenship as input.

• Checks voting eligibility based on age and citizenship.

• Validates user input.

• Handles invalid age inputs using try-except.

• Displays reasons when a person is not eligible to vote.

• Allows checking multiple voters.

• Displays the total number of voters, eligible voters, and ineligible voters.

■■ Technologies Used

• Python 3

■ Concepts Used

• Variables and Data Types

• Input and Output

• Functions

• If-Else Statements

• While Loops

• Try-Except Exception Handling

• Type Conversion

• Input Validation

• Return Statements

■■ How to Run the Project

1. Install Python 3 on your computer.

2. Clone or download this repository.

3. Open the project folder in VS Code.

4. Open the terminal.

5. Run the following command:

```
python voting_eligibility.py
```

If your system uses the **python3** command, run:

```
python3 voting_eligibility.py
```

■ Example

```
Enter your name: Aman
Enter your age: 25
Indian citizen (y/n): y

Aman is eligible to vote.
```

■■■ Author

Created as a beginner Python project to practice programming fundamentals.
